Career Summary

Software Developer with over 4 years of experience delivering reliable and maintainable web applications using .NET technologies, Angular and SQL Server. Skilled in backend API development, unit testing, database design, and debugging complex business logic and third-party integrations. Adept at collaborating with cross-functional teams and leveraging modern tools like GitHub and generative AI to improve debugging speed, code quality and efficiency while maintaining the engineering standards.

Technical Skills

- **Languages/Frameworks:** C#, ASP.NET MVC, .NET Core, Angular, AngularJS
- **Database:** SQL Server (Stored Procedures, Views, CTE, Performance Optimization)
- **Web Technologies:** HTML, CSS, JavaScript, XML, jQuery
- **Testing:** NUnit, Rhino Mocks
- **Tools & Platforms:** Visual Studio, VS Code, GitHub, Postman, Claude, GitHub Copilot
- **API Integration:** REST APIs, debugging third-party service integrations, basic SOAP/WCF

Work Experience

◇ *Software Engineer*

Impetus Incorporation – Kathmandu, Nepal (April 2023 – Present)

Working on Avionte staffing software, contributing to backend services, frontend workflows, database design, and system integrations in a production environment.

Key Responsibilities:

- Designed and maintained RESTful APIs using .NET Core and C# supporting core business workflows in an enterprise staffing system.
- Developed and enhanced Angular / AngularJS frontend modules, implementing dynamic UI behavior based on business rules.
- Led debugging and resolution of complex production issues across API, database, and third-party integrations.

- Improved database efficiency by optimizing SQL Server stored procedures, queries, and execution plans.
- Integrated and maintained third-party APIs and external services.
- Built and maintained unit tests using NUnit and Rhino Mocks to ensure backend stability and reduce regression risk.
- Worked in Agile-based development workflow with GitHub, including system level debugging for critical production issues.
- Applied AI-assisted engineering tools (GitHub Copilot, Claude) to accelerate debugging, refactoring, and feature development while maintaining code quality and architectural standards.

◇ **Backend Developer (.NET/C#)**

DTRG Network – Kathmandu, Nepal (April 2022 – April 2023)

Worked on DG-Cloud (Electronic Health Record system), contributing to backend development, database design, and feature implementation in a structured enterprise environment.

Key Responsibilities:

- Developed backend features for a cloud-based healthcare system (DG-Cloud) using ASP.NET MVC, C# and JQuery.
- Implemented modules including prescription workflows, pharmacy requests, reporting dashboards, and payroll processing.
- Designed and optimized SQL Server database structures, stored procedures, and reporting queries.
- Built and maintained backend business logic for core healthcare and administrative workflows.
- Contributed to bug fixing, feature enhancements, and production issue resolution.
- Gained strong experience in enterprise application architecture and relational database systems.

Education

BSc. CSIT

Tribhuvan University, Nepal

Graduated: 2022 (Transcript Issued: Jan 2023)
